Google Earth Engine: Timelapses

https://earthengine.google.com/timelapse

Global, zoomable video that lets you see how the Earth has changed over 32 years (1984–2016). The majority of the images come from Landsat, a joint USGS/NASA program.

Explore changing landscapes: Find an area of interest and play the Google Timelapse video (note that you can pause and slow down the video).

- Describe patterns and colors that you observe.
- How has an area changed? Remained the same?
- What might have caused changes?
- How do you think this area will change or stay the same in the future?
- Did you find an interesting location?
