

Simple Machines Discovery Sheet

An important part of the scientific process is recording your observations. Ask a question, design an experiment, write or draw your observations. The notes you make here are yours to keep.

Name:	Date:
-------	-------

What question did you ask?	What did you observe (writing)?
What experiment did you do? (What variable did you change?)	What did you observe (drawing)?

In the teacher's guide, you will find several ideas for experiments.
Here are some tables for recording your data.
